Standard Personal Checks

Harland Clarke is committed to finding new and innovative ways to protect consumers from check fraud.

1 Security Weave®
This is a patented, highly intricate design that is extremely difficult to duplicate.

2 Micro Print
There is a fine line of type on the check that can be read when magnified and that is very difficult to photocopy.

3 Security Screen
The screen ensures that the words “Original Document” will fade, distort or disappear if a check has been copied or scanned by traditional means.

4 Photo Safe Deposit® Icon
Provides indication that security features are incorporated on the check and that checks include mobile deposit fraud prevention features.

5 ImageMatch®
Front/Back MICR match.

6 MobileMark®
A checkbox that allows customers to keep track of checks deposited via mobile deposit capture and helps avoid unintended duplicate deposits of the same check.

7 Fugitive Ink
Chemical alterations may cause extreme discoloration, and washing the check will likely cause details of the back to fade or disappear.

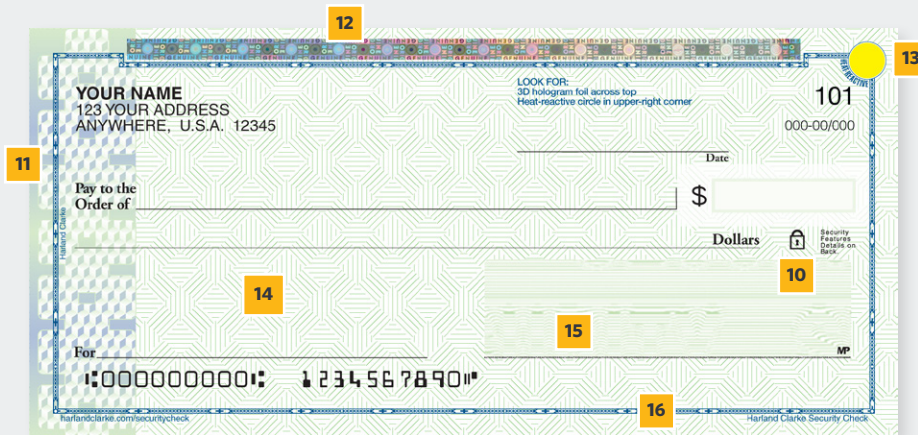

8 Security Warning Box
The box on the back of the check gives a checklist of security features present on the check.

9 Security/Safety Paper
If common chemicals are used to change the original information on the check, stains will appear.

Our goal is to stay ahead of fraudsters and make it difficult for criminals to counterfeit checks or fraudulently deposit checks remotely.

High Security Personal Checks

The enhanced security features in our High Security Personal Checks exceed industry standards.

Additional Features

- 10 Padlock Icon**
Provides indication that there are security features incorporated on the check.
- 11 VOID Pantograph Feature**
VOID will appear in the warning box if the check is scanned or photocopied.
- 12 Hologram Foil**
This feature provides a reflective, three-dimensional appearance is easy to verify with the human eye, and not easily reproduced by ordinary copying or printing.
- 13 Heat-reactive Ink**
Located in the front-upper right-corner, this ink fades from green to yellow when warmed. This feature provides verification of check authenticity and guards against the use of solvents and color photocopying.
- 14 Prismatic Background Pattern**
An attractive woven background pattern deters computer fraud as colors become distorted when copied.
- 15 Security Pantographic Box**
Located over the signature line, this box has the word "Security" embedded, which stands out when copied.
- 16 Check Border**
This feature decreases the ability to counterfeit the check.

As an innovator
in check security,
Harland Clarke
believes protection
is prevention.
